Name: - shubham dhere

Program Name: - CreateTable

JDBC

```java
import java.sql.*;
import
java.sql.DriverManager;
import java.sql.Statement;

public class CreateTable {

        public static void main(String[] args) {
                //Step1: Load Driver or register
        try {
                Class.forName("com.mysql.jdbc.Driver");
                System.out.println("Driver Load
                Successfully");
                //step 2: Create Connection
                Connection
                con=DriverManager.getConnection("jdbc:mysql://localhost:3306/jdbc","root","");
                System.out.println("Connection Create successfully");
                 //Step3: create statement object
                Statement stmt=
                con.createStatement();
                System.out.println("statement create successfully");
                //step 4: write query
                String sql="create table info (id int,name varchar(20),address varchar(30))";
                //Step 5: execute
                query
                stmt.execute(sql);
                System.out.println("table created successfully");

        }
        catch(Exception e) {
                e.printStackTrace();

        }
```

```
        }

    }
```
